Summary

Senior Product Designer with 7 years building SaaS, B2B, B2C, and B2B2C products, working end to end across Product Discovery, UX Research, Interaction Design, UI Design, and Design Systems.

Some results I carry with me: I redesigned Selo H's landing page and form in one week, generating 5x more leads in 30 days and cutting bounce rate 40%. At Instivo, I translated complex business rules into a rule engine, measuring in real usability testing a ~70% reduction in configuration time. At MedMe, I measured a +6% checkout conversion lift in month one. And I grew Fiter's organic traffic by nearly 100% in three months, implementing measurement that didn't exist before.

I built a four-layer design token architecture that cuts front-end delivery time by up to 70%, apply WCAG 2.2 AA across every component I build, and have hands-on knowledge of HTML, CSS, JavaScript, WordPress, and Webflow beyond the design tool. I've coordinated cross-functional teams of 5-10 people (engineering, product, QA, scrum), including mentoring junior designers.

Experience

AUG 2025 – Present | **Senior Product Designer, Vellumwire (Independent)**

- Product design for international SaaS clients, from discovery to production-ready UI: onboarding, dashboards, pricing, checkout, landing pages, institutional sites, organic traffic strategy, digital presence, and e-commerce, using a User Experience metrics strategy.
- Redesigned Selo H's landing page and form in one week, writing the front-end myself, generating 5x more leads in 30 days and cutting bounce rate 40%.
- Applied WCAG 2.2 AA across every design system component, documented in specs and validated through accessibility audits.
- Implemented performance measurement that didn't exist before, defined SEO and growth strategy, and grew organic traffic by nearly 100% in three months, establishing a 2% conversion rate as a measurable baseline for the first time.
- Built a component library and four-layer token design system, ready to serve multiple client styles by swapping only tokens and component versions, even when the change is structural; cuts front-end delivery time by up to 70% and reduces layout errors when coding with AI.
- Lead research, define flows, information architecture, and prototyping in partnership with product and engineering stakeholders, validating solutions before delivery.

JAN 2025 – AUG 2025 | **Senior Product Designer, MedMe Saúde (Contractor)**

- Designed an on-demand healthcare platform from zero (patients book in-home visits with independent healthcare professionals), including identity verification, escrow payment, and three-sided accountability between patient, professional, and clinic.
- Measured a +6% checkout conversion lift in month one after progressive disclosure and field reduction from 20+ to 12-14 fields, informed by Baymard benchmarks.
- Built a responsive design system for scheduling and clinical dashboards, consistent across web and mobile.
- Ran research and usability testing with patients and healthcare professionals, defining flows and prototyping validated solutions before delivery.
- Collaborated with a cross-functional team of 4 engineers and 3 marketing.

JAN 2024 – DEC 2024 | **Product Designer, Freelance**

- Built Catalise Capital's site entirely in code, with no visual builder, and published ABGI's site on WordPress: theming, content structure, and on-page performance.
- Delivered Product Design, Web Design, and branding projects for businesses and startups at different stages of maturity.

- Led discovery, defined requirements, and structured information architecture before any visual decisions.
- Delivered responsive interfaces focused on performance, usability, and conversion, aligned to each client's business needs.

JUN 2023 – DEC 2023 | **Product Designer, Instivo (Contractor)**

- Worked across multiple squads within the Instivo product, in parallel with other designers responsible for distinct modules of the same system.
- Introduced token architecture and a scalable design system at Instivo, building and refining components incrementally, which was later adopted by the rest of the design team.
- Designed, together with the design team, the product's complete docking module: registration, calendar, vehicle records, maintenance, parking, driver-to-vehicle assignment, and inventory.
- Translated complex business rules into a four-part rule engine that connects and underpins this module and others across the system.
- Measured in usability testing with real users a ~70% reduction in configuration time and 5x faster setup and activation of a new unit.
- Designed multiple analytics dashboards within the product, covering operational and managerial views for different user profiles.
- Led discovery and interviews with retail managers, partnering with the PM, translating governance logic into intuitive operational flows.

JUN 2022 – JUN 2023 | **Product Designer, Nineblocks (Contractor)**

- Developed landing pages and web and mobile interfaces focused on conversion for fan-token and NFT digital platforms.
- Created 2D illustration and iconography for product and visual identity.
- Applied UI design and user experience principles across platform evolution, in collaboration with product and marketing teams.

JAN 2022 – JUN 2022 | **UI/UX Designer, Vega I.T (Contractor)**

- Developed high-conversion sites and contributed to UX/UI for a guest-facing product covering the full guest journey: booking, ratings, in-room service requests, TV, internet, and hotel services.
- Also worked on the application's front-end for an extended period, covering operational needs when demand required it, in addition to design work.
- Developed social media campaigns for clients, in addition to product work.
- Developed booking portals and internal management tools for the hospitality tech segment.
- Structured journeys and flows for operational applications, with reusable interface components and patterns across products.
- Collaborated with a pool of approximately 20 developers organized into on-demand teams.

JUN 2019 – DEC 2021 | **Product Designer, Ensight (Contractor)**

- Led the end-to-end product design process (research, discovery, prototyping, UI, and handoff) for B2B SaaS products, on a team of 5.
- Designed Meaple, an app combining event discovery, social coordination, ticketing, and in-event payment into one product, with discovery, research, and competitive analysis (13 competitors mapped), defining personas and priorities before any wireframe.
- Prototyped solutions and validated design decisions through A/B testing before handoff to development.
- Designed QuaQ, an audience data-capture product for TV networks: the host invites viewers to answer a live questionnaire, entering them for prizes in exchange for their response.
- Designed Facto, a marketplace connecting local small business owners with service professionals: profiles with portfolio, ratings, ranking, and social proof, service listings, and an in-app chat to handle the entire process. Designed with the professional's needs at the center, using gamification to drive profile completion and engagement in exchange for more visibility and clients. Delivered the full design in one week under a tight deadline, immediately following the research phase.
- Delivered documented interface components and specs across the Meaple ecosystem.
- Collaborated with product and development teams on the continuous evolution of the solutions.

Skills

Front-End & Performance

- Production HTML, CSS, JavaScript · Performance and SEO playbook: inline CSS removal, CDN configuration, media optimization · WordPress and Webflow, end to end

Design Systems & Governance

- Design tokens and advanced token architecture (Core, Palette, Brand, Semantic) · Atomic design · Style guides and Storybook-style documentation · Scalable design systems and component libraries · WCAG 2.2 AA, accessibility, and inclusive design · Design QA and implementation audits

Research & Strategy

- Product discovery, desk research, and UX research · Market research, personas, and empathy mapping · Contextual inquiry / field studies · User interviews · Journey mapping, opportunity framing, and competitive analysis · Jobs-to-be-done · UX writing (PT-BR)

Ideation & Validation

- Design thinking · Design sprints · Card sorting and tree testing · Heuristic evaluation · First-click testing · Usability testing · User flows, information architecture, visual design, and interaction design · Rapid prototyping and microinteractions · A/B testing

Business Rules & Regulated Flows

- Translating business rules into customer-centered journeys · Service blueprints and end-to-end flows · Regulated, sensitive flows (identity verification, escrow payment) · Requirements gathering and functional specifications

Collaboration & Leadership

- Coordinating cross-functional teams of 5-10 (engineering, product, QA, scrum) · Mentoring junior designers · Product OKR/KPI definition · Design-to-development handoff and spec documentation · Agile / Scrum · Stakeholder management

Tools

- Figma, FigJam, Miro, Framer, ProtoPie, Penpot · Adobe Creative Cloud · Google Analytics, Hotjar, Maze · Jira, Trello, Notion · AI-assisted workflows (Claude, Claude Code, Cursor, Antigravity, Lovable, Gemini, ChatGPT)

Languages

- Portuguese (native) · English (C1-C2)

Education

2013 – 2017 | Bachelor's Degree in Design

Universidade Federal de Santa Catarina (UFSC), Florianópolis, Brazil
